WELCOME

Most Welcome to Become Part of True Smart Money Concept. inside of this E-book you'll Learn all about SMC that how things actually works in easy to understand way. All about Structure Mapping , Liquidity Entry Mastery. You can apply anywhere like Forex Pairs , Stocks , CryptoCurrency and indices etc. Study as much Possible study again and again because maybe its take some time understand few topics but once you understand that how things actually works then definitely you'll Smash it , this is GAME CHANGER way to understand reason behind price movement.

We're Wishing you Successful Trading Journey.

TABLE OF CONTENT
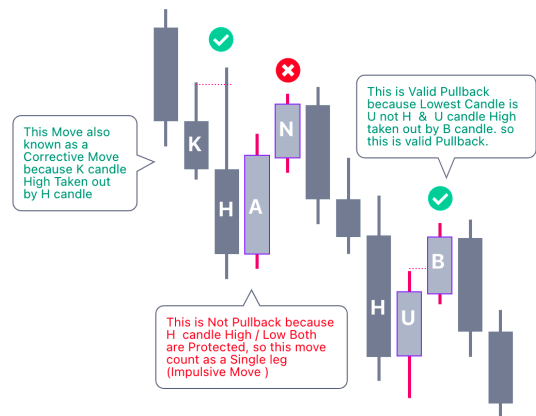

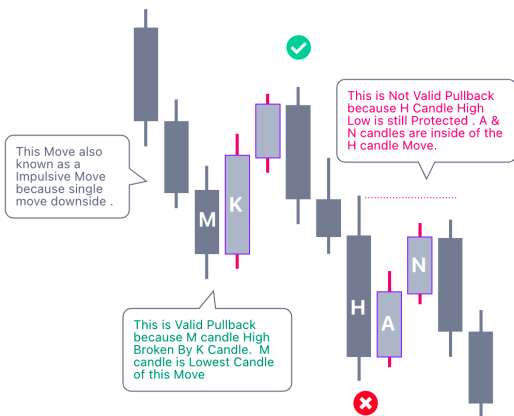

IMPULSE & CORRECTION

When Market momentum is very strong to the upside or downside those types strong unhealthy price action is called Impulsive Move, Price generally move in two way impulse and correction. you can understand like this in impulsive move lots of institutional and Banks Buying Momentum and correction phase retail traders trying to buy sell and market move in a particular range. Now i am going to explain you here in details that how its looks.

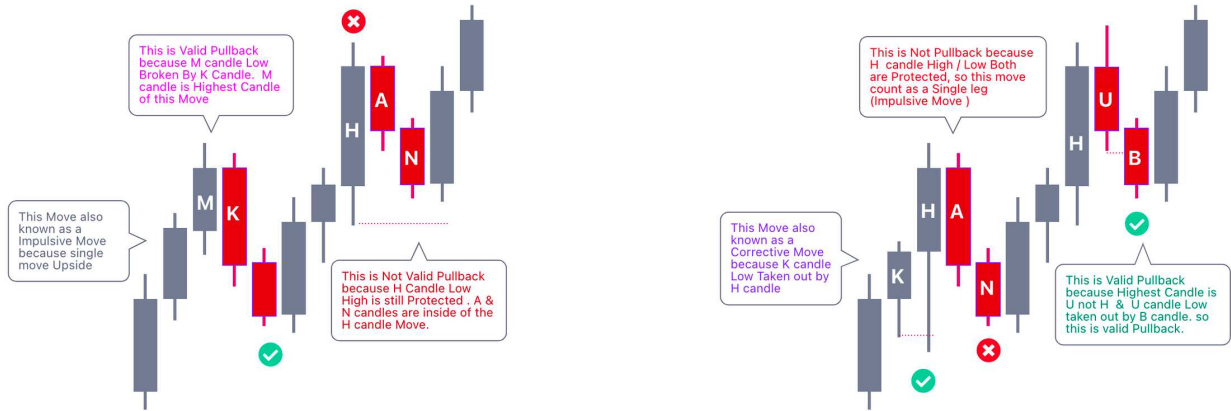

——————————— impulsive Move

----------------------- Corrective Move

This Move also known as a Impulsive Move because single move downside .

This is Valid Pullback because M candle High Broken By K Candle. M candle is Lowest Candle of this Move

This is Not Valid Pullback because H Candle High Low is still Protected . A & N candles are inside of the H candle Move.

This Move also known as a Corrective Move because K candle High Taken out by H candle

This is Not Pullback because H candle High / Low Both are Protected, so this move count as a Single leg (Impulsive Move)

This is Valid Pullback because Lowest Candle is U not H & U candle High taken out by B candle. so this is valid Pullback.
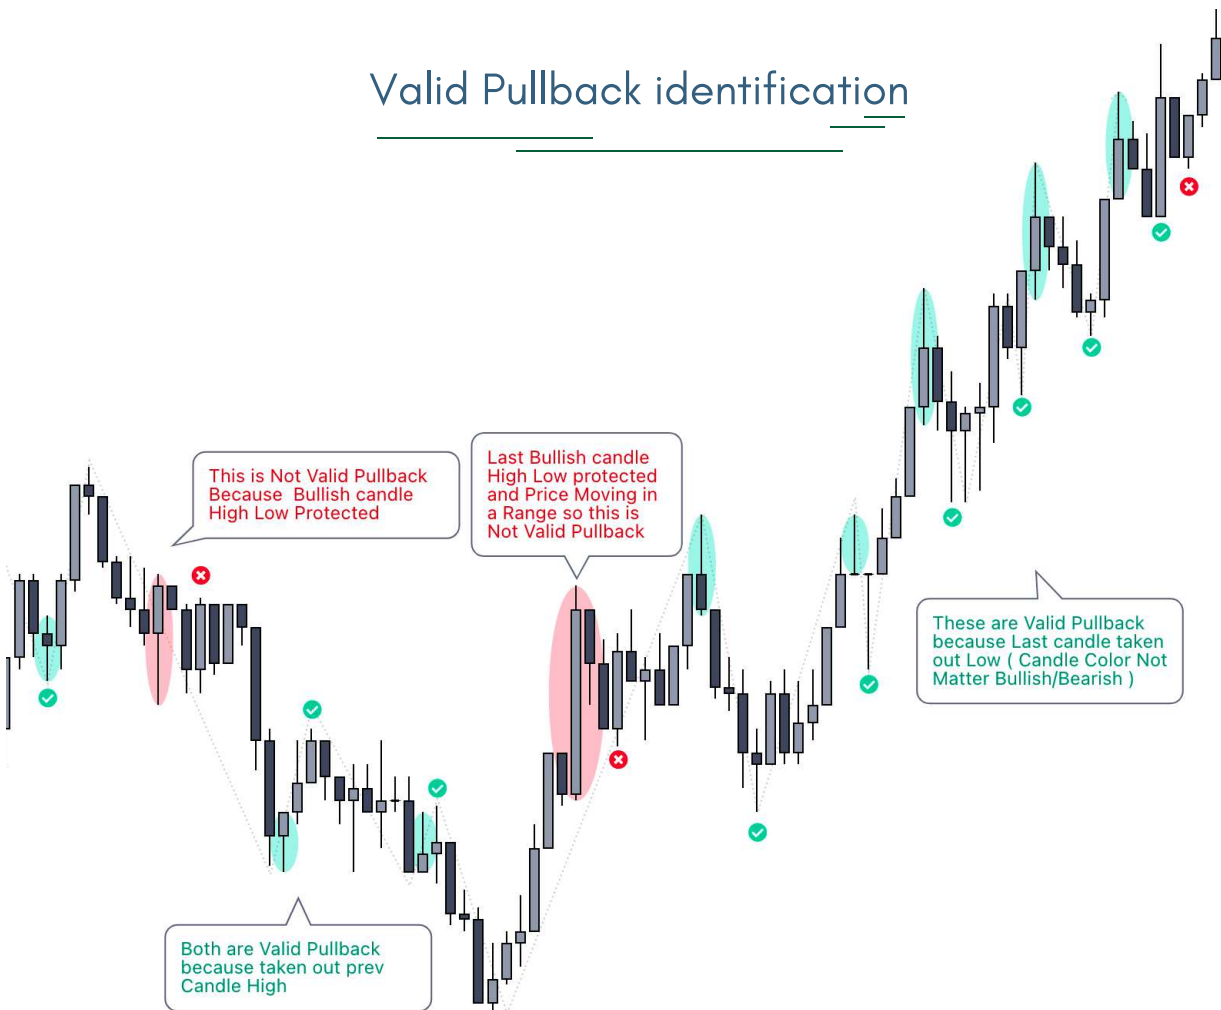

Remember

When Price taken out Prev Candle High / Low then candle colors not matter may be Bullish or bearish in both scenarios are valid. one more thing Price taken out High/Low then sometimes candle close or Sweep Prev Candle High Low . Both scenarios are valid.

This is Valid Pullback because M candle Low Broken By K Candle. M candle is Highest Candle of this Move

This Move also known as a Impulsive Move because single move Upside

This is Not Valid Pullback because H Candle Low High is still Protected . A & N candles are inside of the H candle Move.

This is Not Pullback because H candle High / Low Both are Protected, so this move count as a Single leg (Impulsive Move)

This Move also known as a Corrective Move because K candle Low Taken out by H candle

This is Valid Pullback because Highest Candle is U not H & U candle Low taken out by B candle. so this is valid Pullback.

Valid Pullback identification

This is Not Valid Pullback Because Bullish candle High Low Protected

Last Bullish candle High Low protected and Price Moving in a Range so this is Not Valid Pullback

These are Valid Pullback because Last candle taken out Low (Candle Color Not Matter Bullish/Bearish)

Both are Valid Pullback because taken out prev Candle High
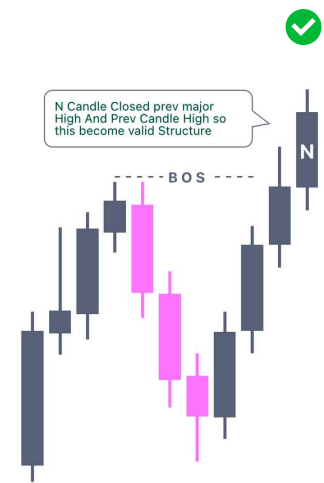

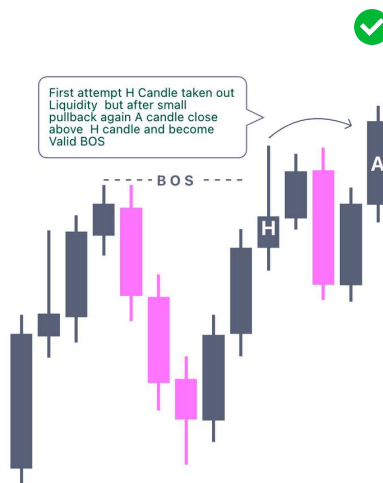

STRUCTURE MAPPING

Smart Money Concept basically backbone of two things Structure and Liquidity , in this part we are going to discussion in details about Break of Structure and Change of Character. to marking structure usually we need one thing that is inducement to confirm structure also to take entries . Inducement are very important to marking structure, now i am going to show you exactly that how you can draw advance structure in different different situation and what kind of criterias you should follow to marking structure.
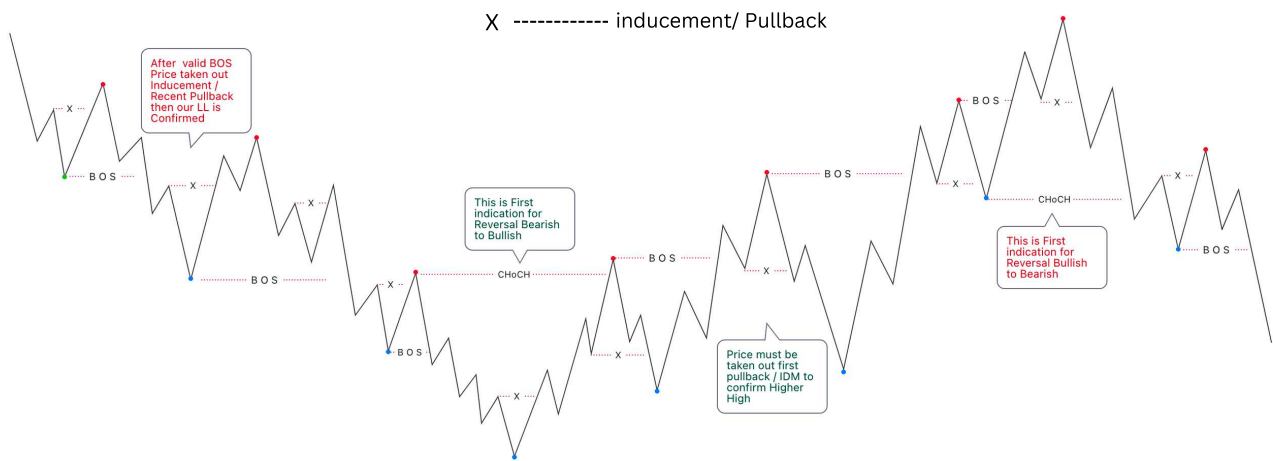

💡 Remember

Market is Bullish or Bearish doesn't Matter in both scenarios you need complete candle closure to confirm Break of structure if price candle sweep so those structure count as a Liquidity sweep / Stop hunt . Now i am going to show you some Bullish structure Diagrams that how you can identify valid and invalid BOS / CHoCH .

✅
K Candle Closed prev major High so this become valid Structure
- - - - B O S - - - -

✅
First attempt H Candle taken out Liquidity but after small pullback again A candle close above H candle and become Valid BOS
- - - - B O S - - - -

✅
N Candle Closed prev major High And Prev Candle High so this become valid Structure
- - - - B O S - - - -

❌
K Candle Sweep prev major High so this is Not valid Structure
- - - - B O S - - - -

❌
First attempt H Candle taken out Liquidity and next candle Not close above H candle so this is Not Valid BOS
- - - - B O S - - - -

❌
A Candle Sweep prev major High And Prev Candle High and Rest Candles Not Closed above A candle High so this is Not valid Structure
- - - - B O S - - - -

Remember

These are Bullish and Bearish Chart explanations you need to understand every point very carefully and peacefully because once you understand Structure mapping clearly then rest things will be easy to understand. Again and again try to understand each point and topic as much possible then forward on next topic. This is game changer and unique way to structure mapping
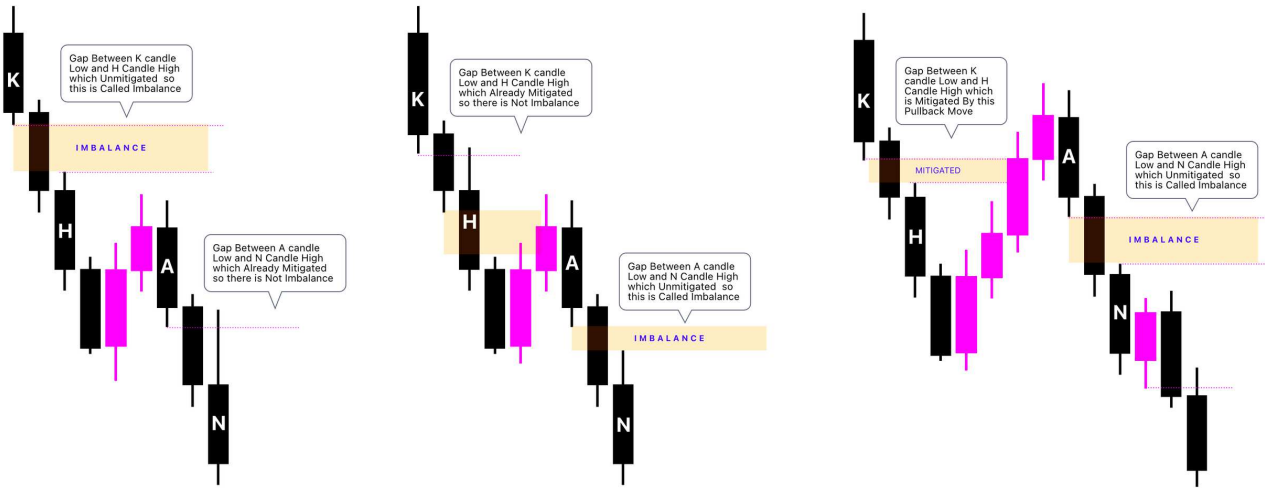

Bullish Structure Mapping
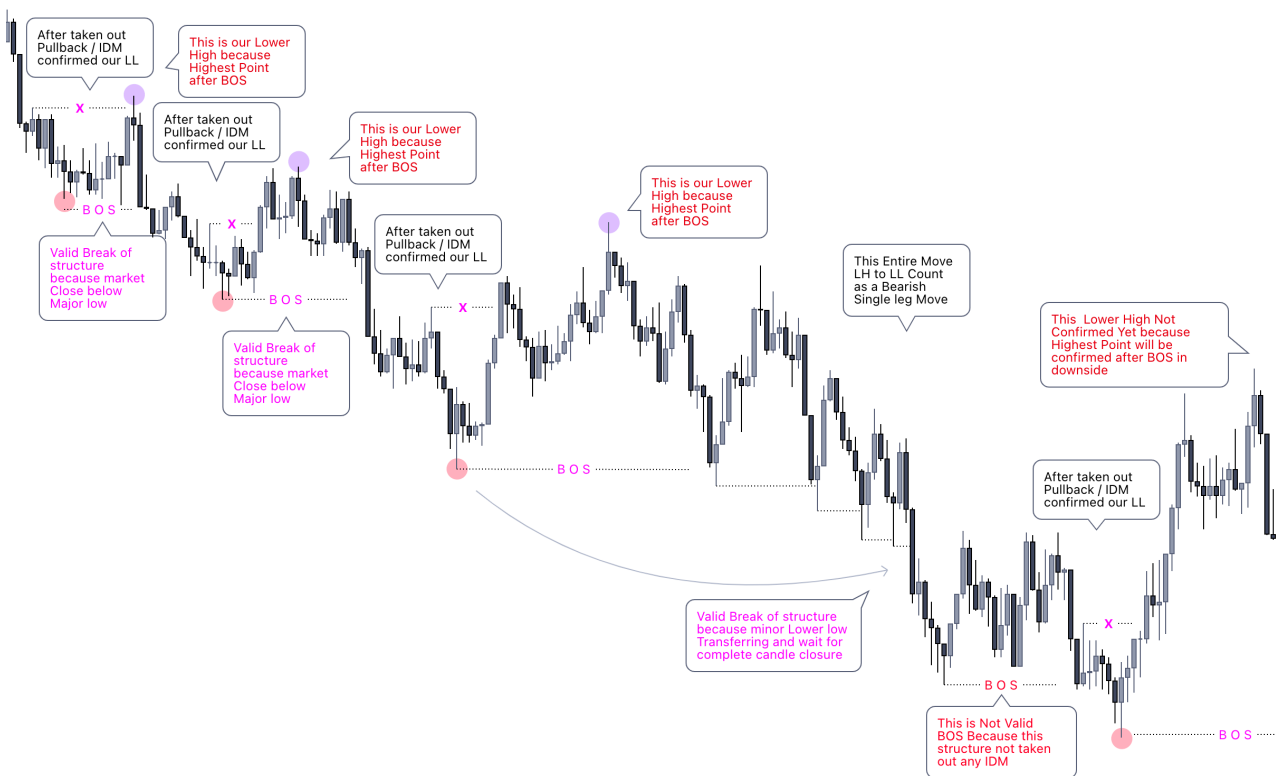

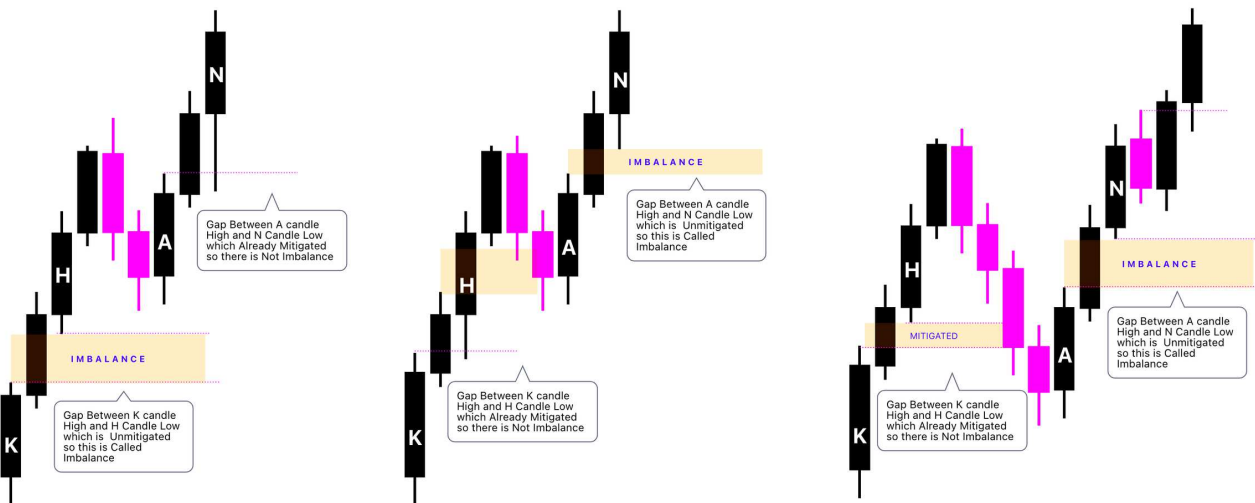

Bearish Structure Mapping

IMBALANCE / FVG

Price generally drop sharply or Push Higher in unhealthy Way then market try to pullback to fill imbalance . There are different different name Fair Value Gap / Imbalance / inefficient Price Action . Generally we use in During POI & Order Block Marking .You Can understand like this below examples .

Bearish / Bullish Imbalance

these are Given examples to find extreme imbalance Because most of the time Fill imbalance
its not necessary to fill every time because there are lots of different factor to fill imbalance
on specific point . imbalance mainly use during entry time to Find POI and Order Block .
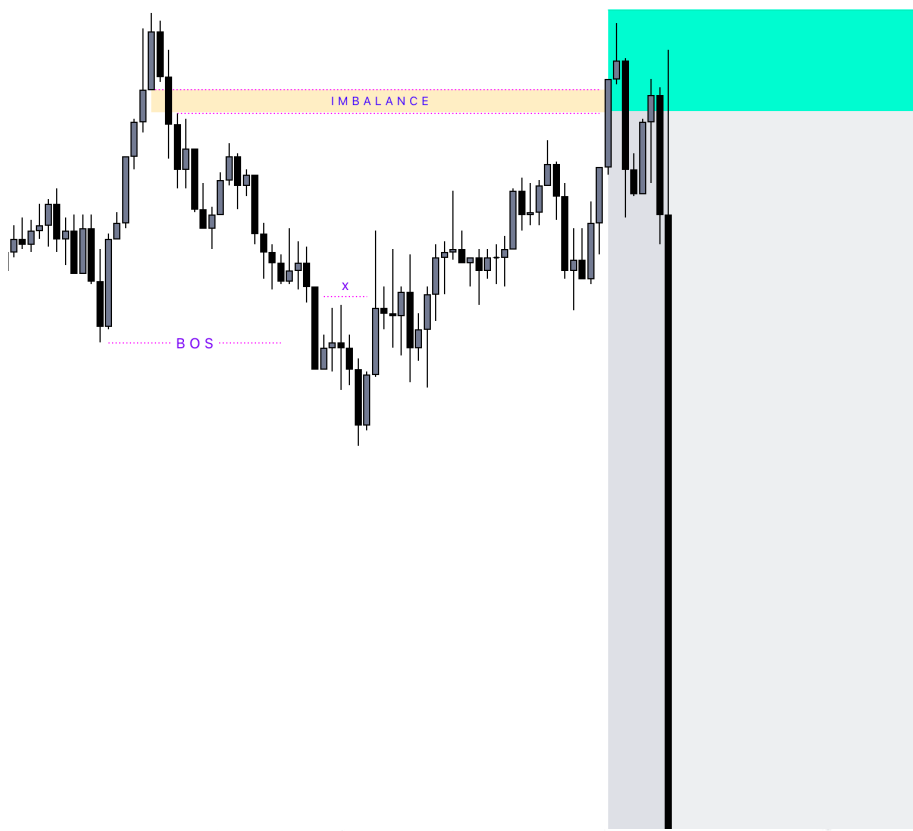

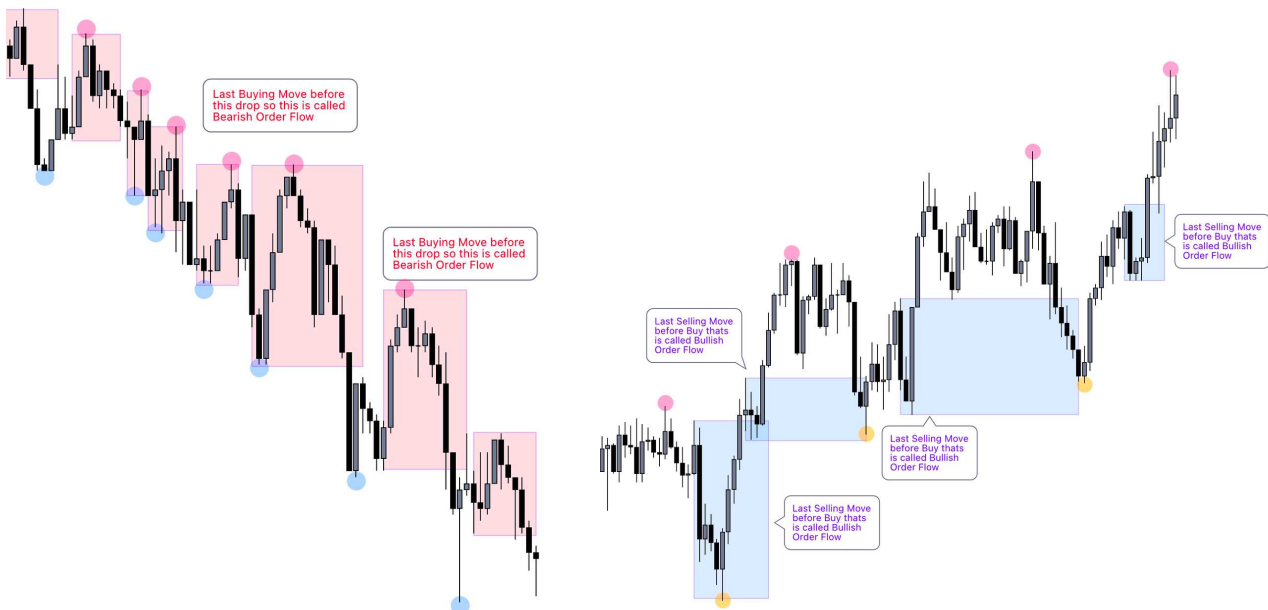

ORDER FLOW

Order Flow basically you can easily understand like this Last Buying move before drop thats is called Bearish Order Flow and same thing in Bullish Market that Last selling Move Before the Buy thats is Called Bullish Order Flow . Lets Understand more Clearly by Given Examples .

Mitigated Order Flow it means Price already done so no use for this order Flow in Future. This is One time Use Only

MITIGATED ORDER FLOW

Unmitigated Order Flow it means Price can come back again to hit before drop to the downside

UN-MITIGATED ORDER FLOW

UN-MITIGATED ORDER FLOW

Unmitigated Order Flow it means Price can come back again to hit before drop to the downside

MITIGATED ORDER FLOW

Mitigated Order Flow it means Price already done so no use for this order Flow in Future. This is One time Use Only

Bearish / Bullish Order Flow

Last Buying Move before this drop so this is called Bearish Order Flow

Last Buying Move before this drop so this is called Bearish Order Flow

Last Selling Move before Buy thats is called Bullish Order Flow

Last Selling Move before Buy thats is called Bullish Order Flow

Last Selling Move before Buy thats is called Bullish Order Flow

Last Selling Move before Buy thats is called Bullish Order Flow

ORDER BLOCK

Order Block is main Part in Smart Money Concept during entries . Order Block means where Smart Traders Entered for buys and sells . to mark any Bullish / Bearish Order Block Price must be proper imbalance and taken out Prev Candle High Low to confirm Order Block .Now we are going to discuss in more details that how we can identify and trade it. price generally react from Decesional Order Block or Extreme Order block .
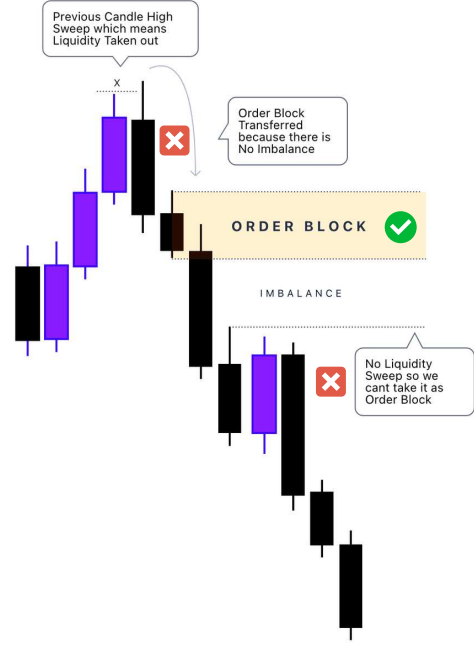

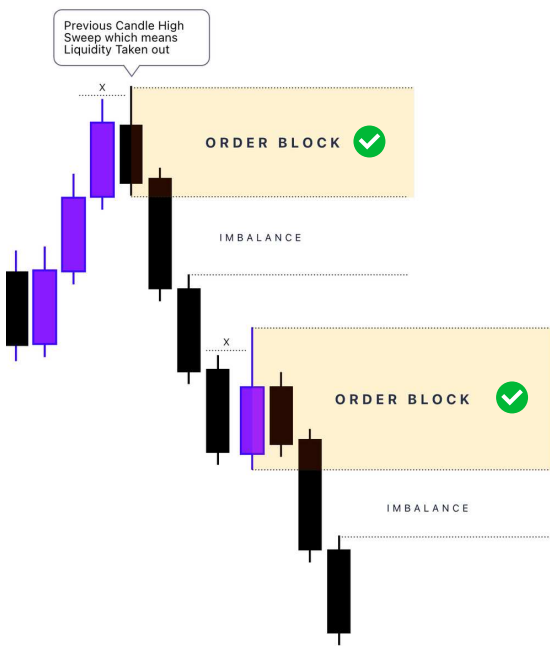

Order Block identificatrion
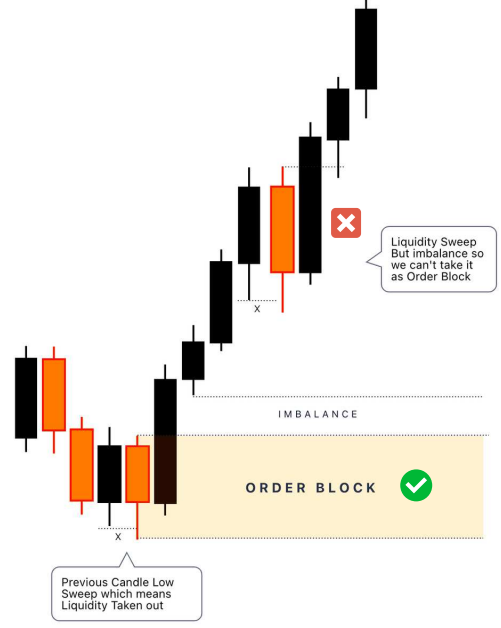

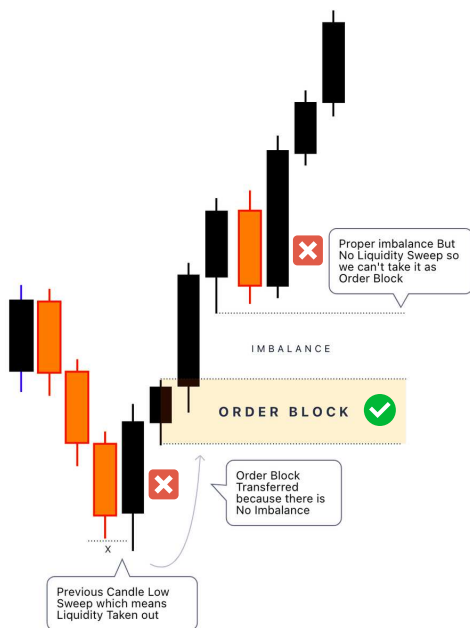

Now you can understand more better clearly that how things actually work in order Block , to mark oder Block Proper imbalance and Liquidity Sweep Order Block .in upcoming chapters we 'll discuss Entries Parts in more details . these are just examples to identify valid OB .
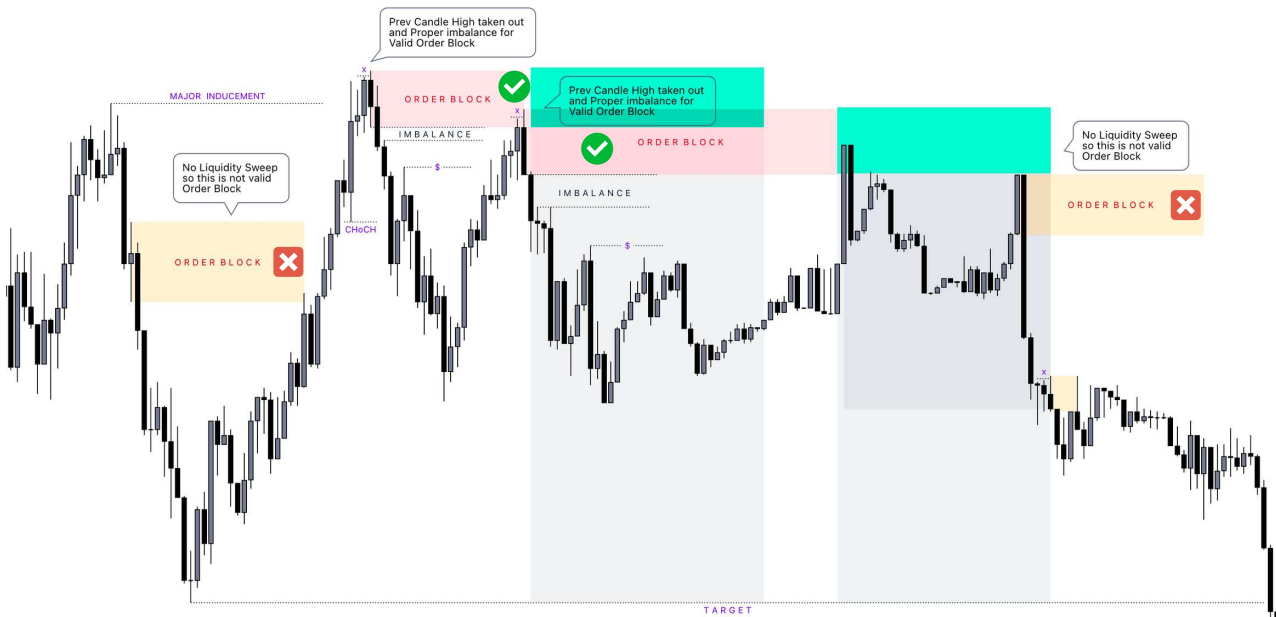

Bearish Order Block

Bullish Order Block

IFC CANDLE

institutional Funding candle is Big Part in SMC to identify POI . When Price taken out any major Swing High or Low and also session major high low taken out that's called IFC . Basically IFC Candle mean which taken out all major StopLoss and then React from Top/ Bottom for Reversal . after taken out Liquidity you can buy or sell in LTF Confirmation . One more thing you need to understand IFC Candle colors doesn't impact and candle closing also you can use in some cases (if Price already tap on any Other HTF POI) . Now you can understand More Better Below Given Charts Explanations .

institutional Funding Candle

RETAIL LIQUIDITY

Majority of the traders trade based on Retail Pattern Like Trendline,Patterns,Indicators and Support & Resistance . this is Biggest Reason to manipulate Retail Patterns because Smart Money Traders (BANKS & INST) trade against traders . Now i am going to explain here that how traders think and then what happend after that .

SELL ENTRY

SELL ENTRY

X

SELL ENTRY

SELL ENTRY

X

X

RETAIL DEMAND ZONE

Retail Traders trying to Buy and Push Price Higher but failed to hold because Price momentum is Bearish SMC TRaders Selling
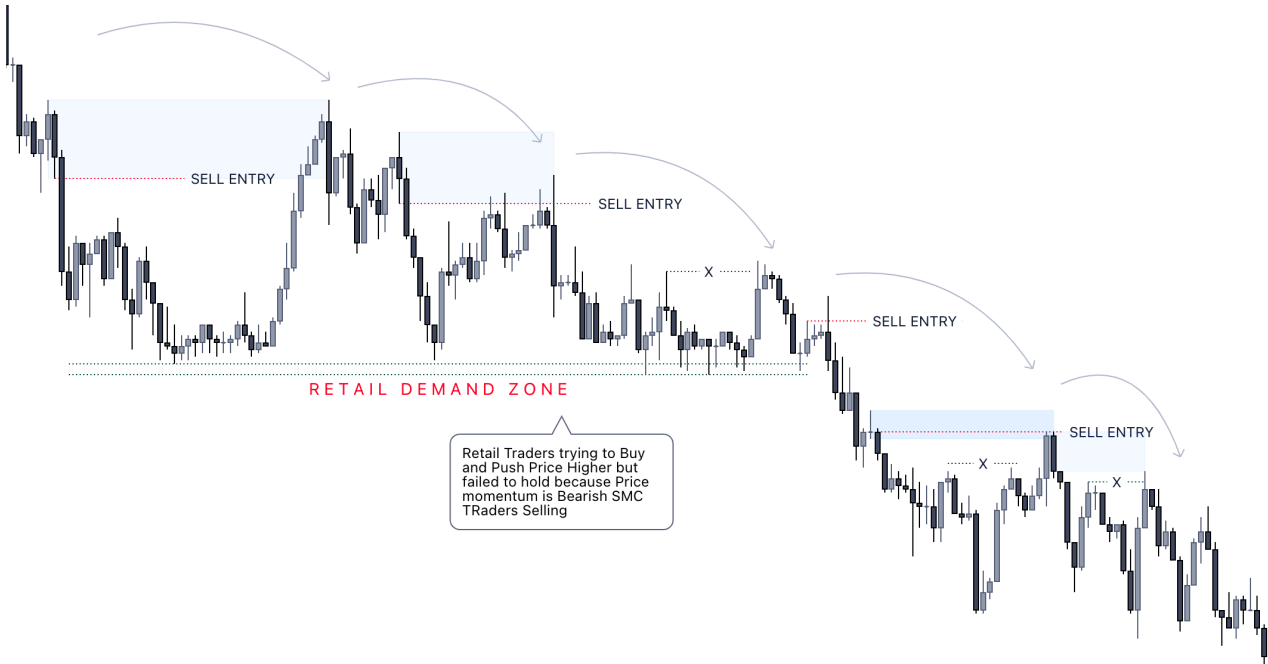

Support & Resistance / EQH / EQL

Most Of the SnR Traders trying to sell here because Strong Supply/Resistance Zone But You have to wait until taken out all Liquidity before enter .

After taken out IDM you can sell here as per single candle Mitigation Entry

RESISTANCE OR EQUAL HIGH

X

CH

Trendline are big part in Retailers trading method , When you are Looking for Buy or sell after trendline broken then you need to wait for proper setup as per SMC . when Price Broke upside then think about sell setup and if price broke downside then think about Buyside as per SMC , But you need to remember some SMC Based Criteria not only based on Trendline. these given examples will help you a lot to understand things that how Trendline Traps.

Finally Collect all Retail Money whos selling based on Trendline and Breakout and tap on unmitigated Order Block and SELL

INDUCEMENT

First Confirmation for Smart Money Traders that Price taken out Inducement

Strong Bullish Breakout For Breakout and Trendline based Retail Traders

CHoCH

Second Confirmation that Price break recent High as a CHoCH

Trendline and Breakout Liquidity

CHoCH

CHoCH

Price tap on Order Block buy here after Trendline Trap

People Buying Here to push Higher But Market Taken out Liquidity and tap on POI and Push Higher

DEMAND ZONE

Trendline Broken Downside and People Start Selling after Trendline Broken and get trap

Trendline Broken Downside and People Start Selling after Trendline Broken and get trap

POI

SMART MONEY TRAP

Lots of Smart Money Traders usually trade Based on Structure and Order Block but in Reality Order Block is Not SMC . Order Block just additional Confirmation for buy or sell . when you look any order Block then dont trade blindly you have to wait for inducement or Liquidity sweep Clear Confirmation before buy sell on Order block . Let see how it work .

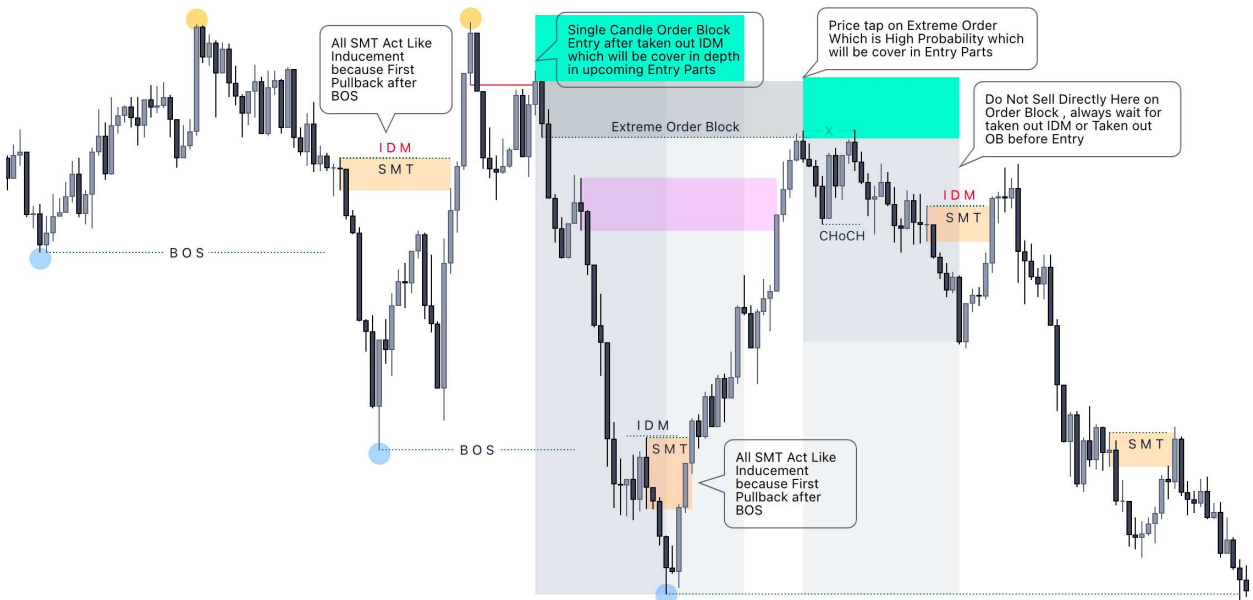

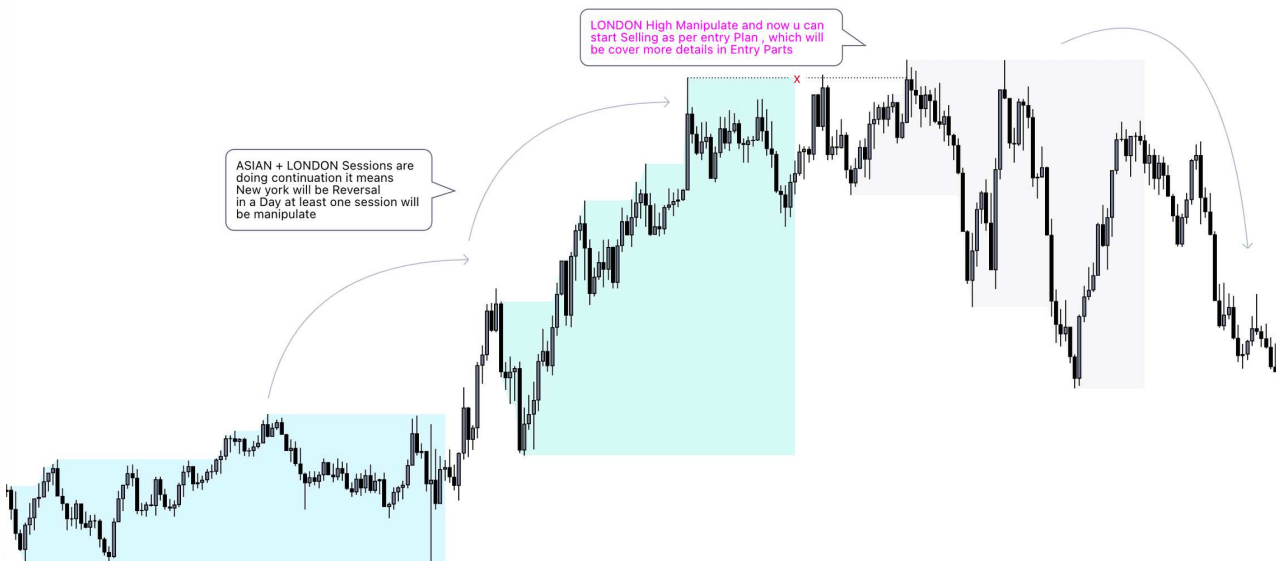

Smart Money Trap
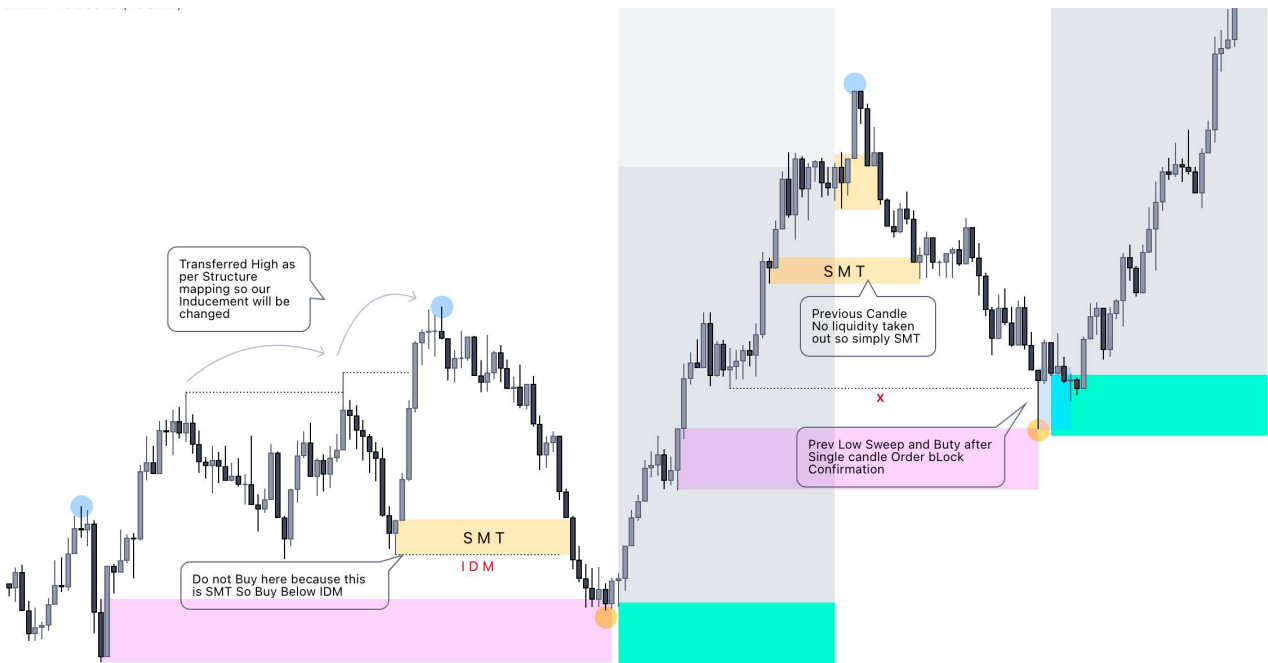

SESSION LIQUIDITY

Time and Price are important part in Smart Money Concept when Market taken out any Session High Low then market gives a reversal move to the upside or downside . because Every Session High / Low act Like Liquidity , in a day at least one session will be manipulate . if ASIAN + LONDON are continuation then New York gives you Reversal Move . if ASIAN Low Swept then LODON and NY will do continuation . Now Lets understand by few Examples .

ASIAN LOW

Market taken out ASIAN LOW and went because SESSION High/ Low act Like Liquidity

When Market sweep Session Low then you can Buy using single candle mitigation or CHoCH confirmation

Session Liquidity identification

LONDON High Manipulate and now u can start Selling as per entry Plan , which will be cover more details in Entry Parts

ASIAN + LONDON Sessions are doing continuation it means New york will be Reversal in a Day at least one session will be manipulate
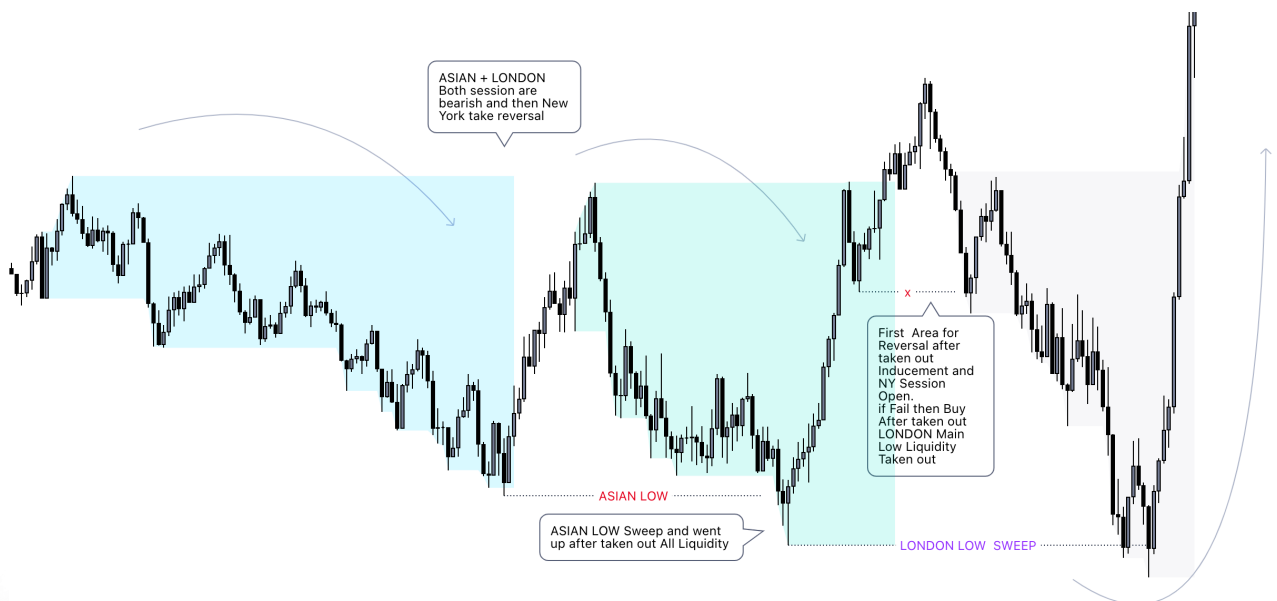

Every Session High Low act like Liquidity because most of the traders they Put the Buy or Sell stop order below or above session High , Market need Liquidity to Push Higher or Lower and these types of Orders act like Fuel . How you Can Trade like this setups. I'll explain more better in Entry types Topic . these are few More examples about Session Liquidity .

When Price close above so this is not sell setup but you can sell here after CHoCH Confirmation

ASIAN HIGH

After Taken out Prev Candle High market gives indication for Reversal

Why we are not selling here even Liquidity Sweep because already ASIAN High / Low Sweep so one session in a Day will be sweep which will be More High Probability

ASIAN LOW

After taken out Trendline Liquidity and tap on unmitigated Order Block and Buy Here & NY Open

Market Taken out ASIAN Session low Sweep (Strong indication for Reversal)

Session Liquidity identification

ASIAN + LONDON Both session are bearish and then New York take reversal

First Area for Reversal after taken out Inducement and NY Session Open.
if Fail then Buy After taken out LONDON Main Low Liquidity Taken out

ASIAN LOW

ASIAN LOW Sweep and went up after taken out All Liquidity

LONDON LOW SWEEP

DAILY CANDLE LIQUIDITY

Prev Day Candle High / low act Like Daily Liquidity reason are simple and similar as Session Liquidity because most of the traders buying on breakout . When Market break prev candle low then most of the traders trying to sell after break previous low . same things happen in Bullish side . When Market is bearish then taken out prev Day High which is High Probability sell and Buy for short term in Bearish Market . Same thing happened in Bullish Market . after taken out Liquidity you have to switch into M15 CHoCH For confirmation . I'll Explain more better in Entries Parts . Now you can understand more better clear that How you can identify Daily Liquidity .
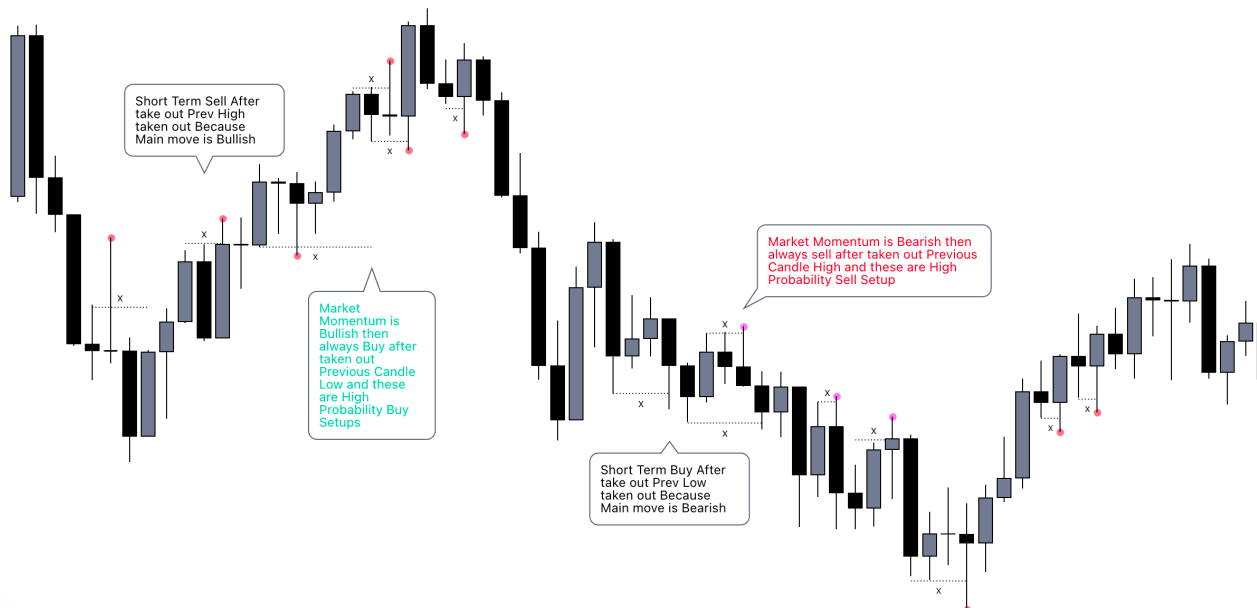

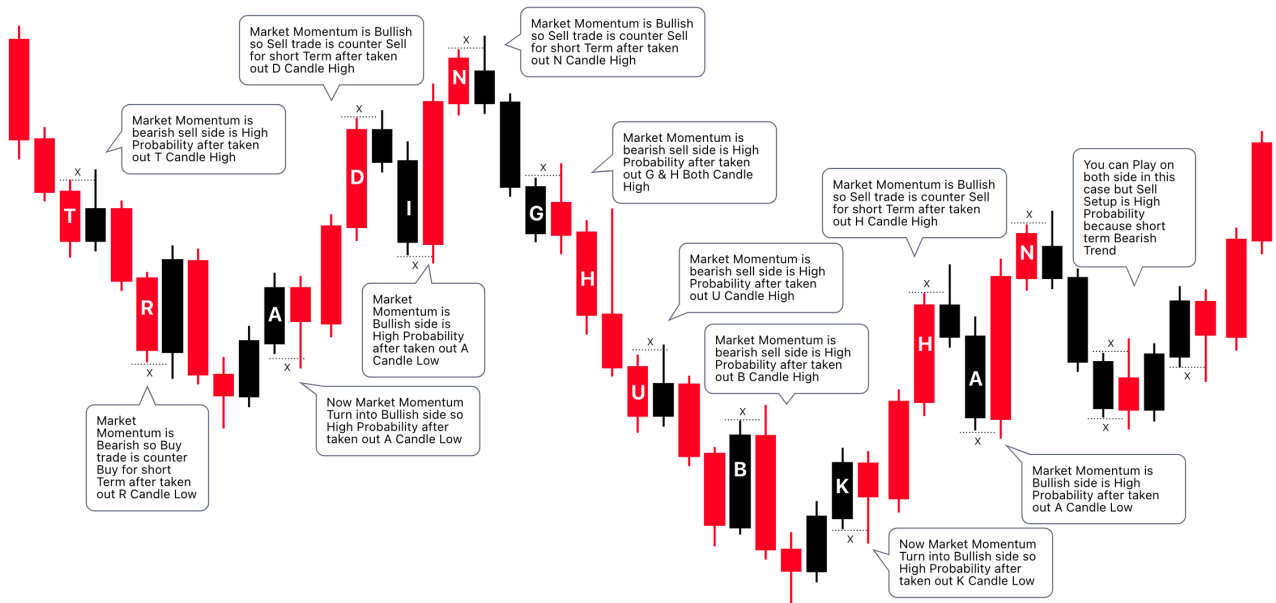

POI IDENTIFICATION

An specific areas where you can take risk for buy and sell thats called Price Of Interest . there are different Different Types POI Session High Low which act like Liquidity But How you can identify which Liquidity we can use as a POI . Order Block also use as a POI and inducement and Liquidity . Now i am going to explain here that how many types POI work in smart Money concept and how you can identify , Lets Understand By Given Few Examples .
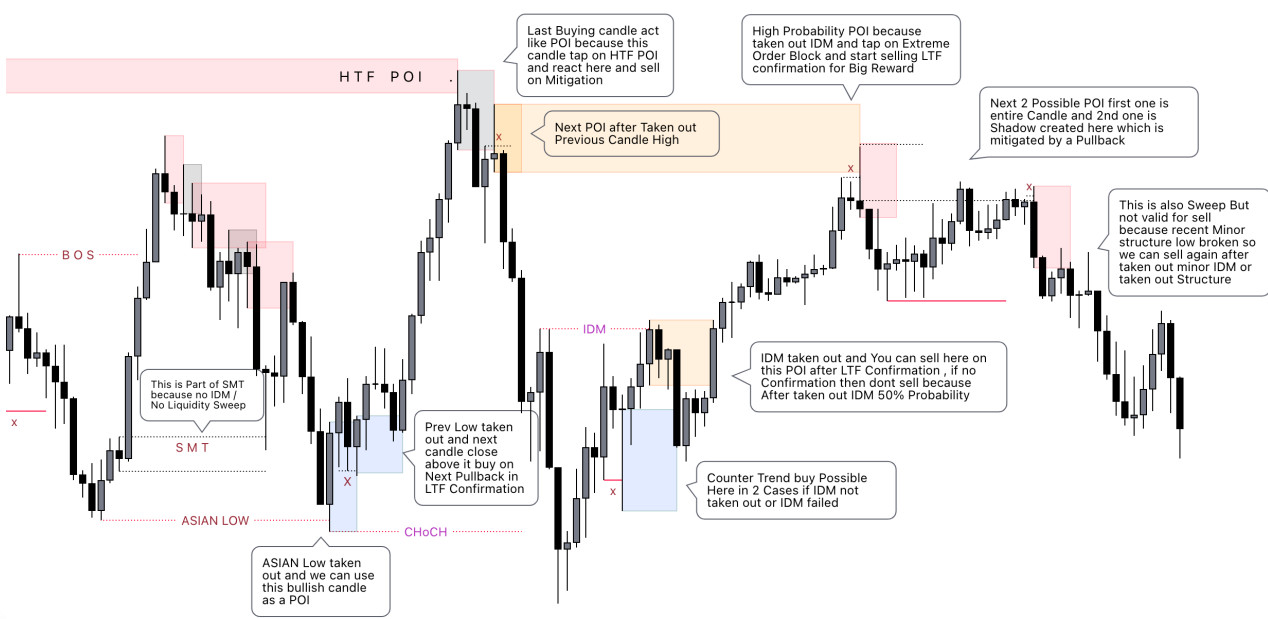

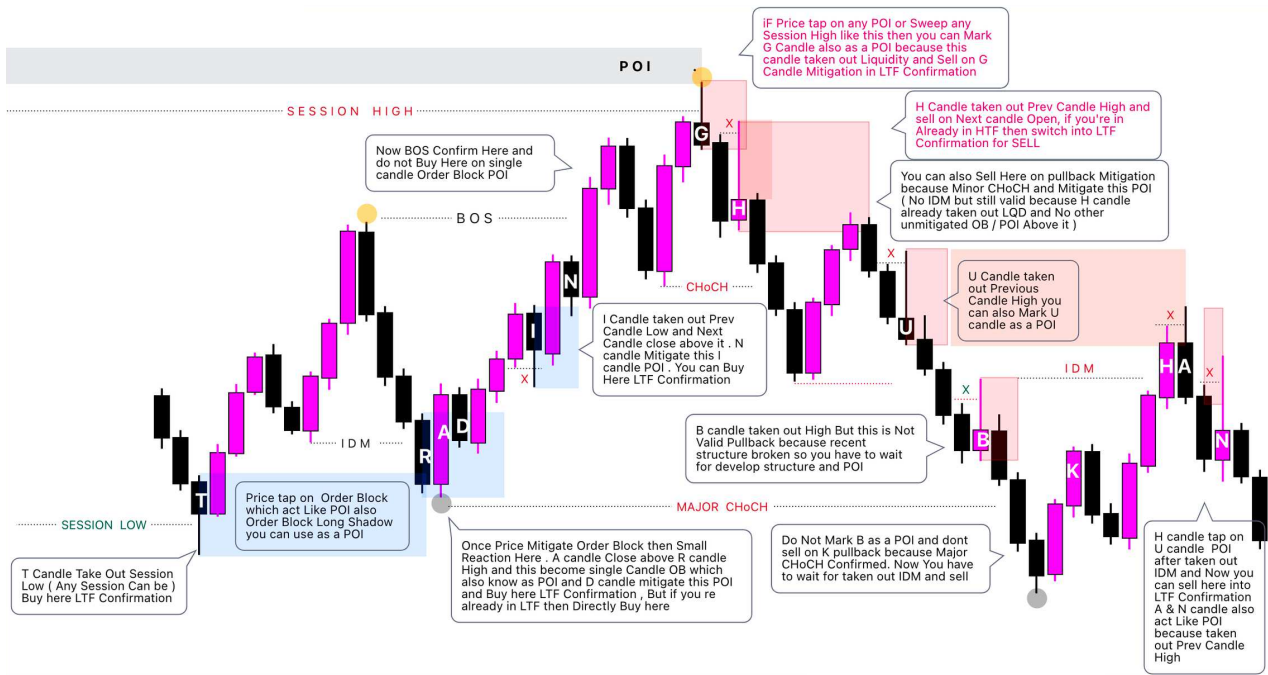

MULTIPLE TIME FRAME

Multiple time frame analysis mostly we use to identify structure, trend , entry criterias and different different time frame depend on different types of trading style and different types of markets Like Forex , Crypto , Stock , indices , synthetics and more . You have to use 2 Time frame as a Day Trader . First I am going to show you **FOREX** Example.

HTF - M15

Recent High taken out then LL is Confirmed

These are 2 POI where we can sell After Confirmation here in LTF M1

Flip Entry Also applicable here

B O S

LTF - M1

Price tap on Extreme OB after taken out IDM

Single Candle Sweep Entry take out Previous Candle High

Tap on Next POI and wait for LTF Confirmation CHoCH and sell after taken out IDM or taken out SMT and sell like this

CHoCH

CHoCH

This is CRYPTO Market example BTC USDT and you can take any currency Pair , I used H1 as a Higher Time Frame as per Day trader and Same time frame H1 you can take in Forex Market then you should use M5 LTF For confirmation .

HTF - M15

LTF - M1

Now this is BANK NIFTY / STOCK Chart to show you that how you can trade in Multiple Time Frame . First identify POI in HTF which 2 way to identify POI . 1st one is buy or sell after taken out PDL / PDH and switch into LTF M5 for Buy/Sell confirmation . because Stock Market open for some specific time Only . so we don't need to use M15 H1 as a Day trader perspective as we do in Forex Crypto . so we should follow PDH / PDL to mark HTF POI and second is M5 HTF POI and M1 For entry BUT if you're following M5 as a HTF Then Mostly cases you'll see entry in M1 Single candle mitigation based . so this is Example that how you can Trade as per PDH/PDL Higher Time Frame POI .

🕐 HTF - PDL/PDH / M5

🕐 LTF - M1
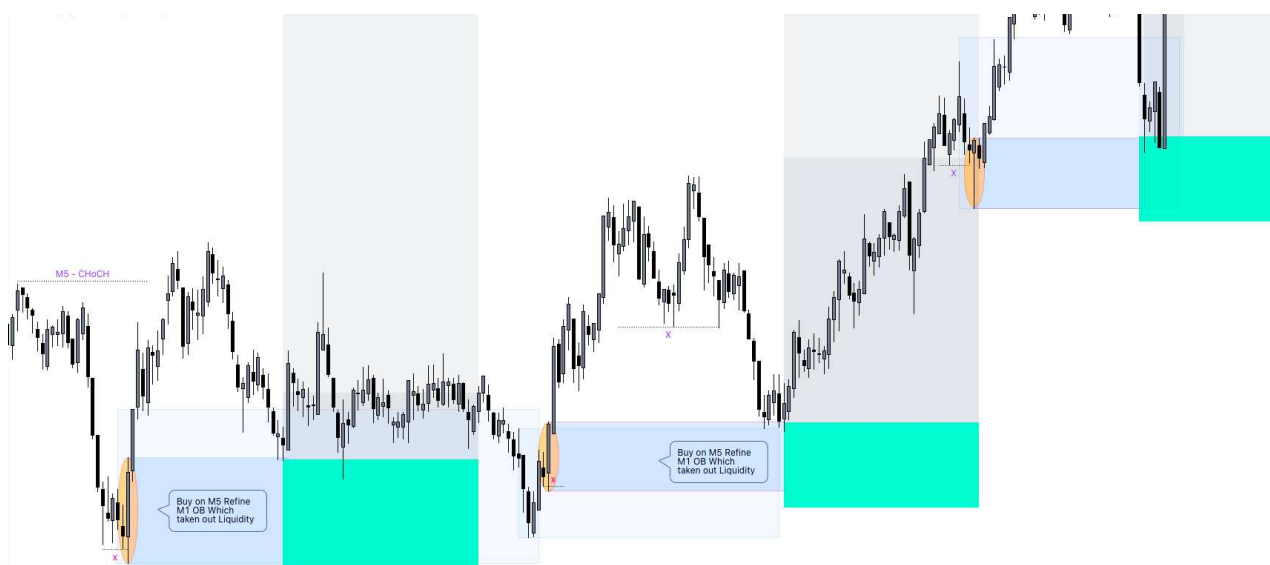

ENTRY TYPES EXPLANATION

Everything is correct in each strategy but main part is that how we should play on POI . Now i am going to explain here all Major High Probability entry Types . that how you can take Decision in Lower time confirmation to reduce Risk and maximize your Profit . There are different different types of Entry Module Like CHoCH / BOS / FLiP / Single Candle Mitigation Entries . Let see What Happen in Lower time frame during entries .
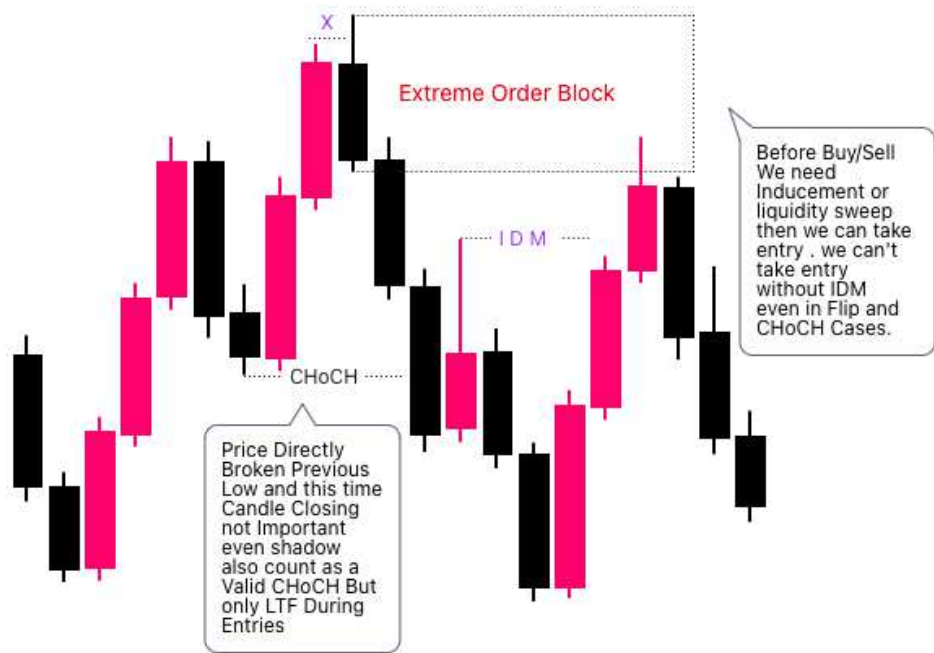

CHoCH with IDM Entry Module

Flip Entry Module are very common and powerful method in smart money concept . when Price tap on HTF Supply Zone then you have to switch into Lower time frame as per our Multiple Time Frame correlation . You have to switch into LTF and wait for confirmation if price not break directly prev recent high / low as a CHoCH and take some small pullback on Order Block and not able to hold OB and failed . so this process is called Flip when Demand convert into supply D2S or Supply Convert into Demand S2D . Lets understand by given diagram and Example .
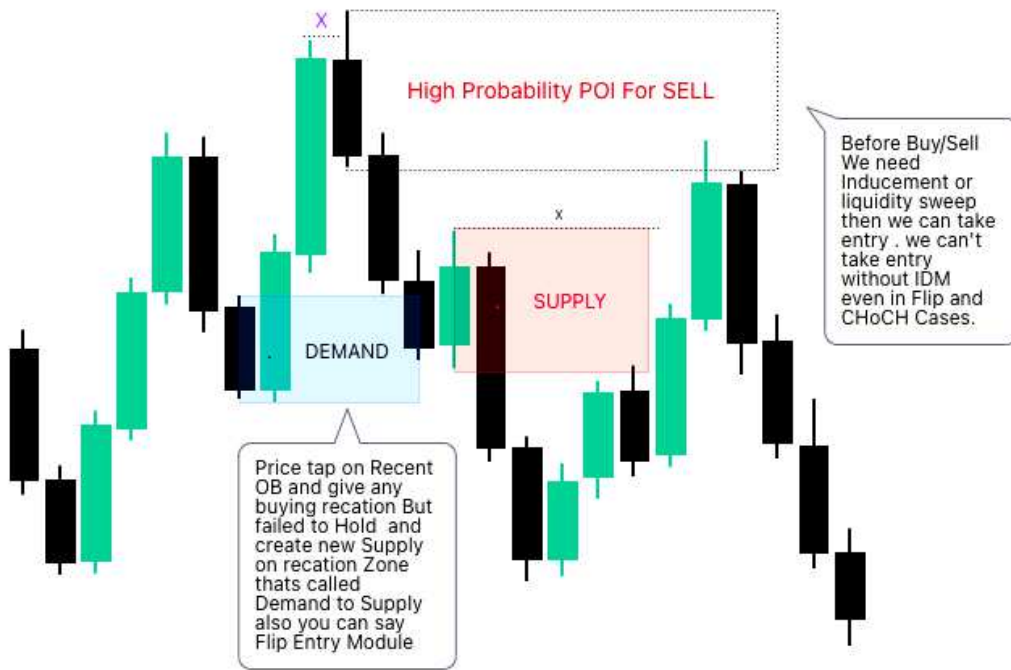

FLiP with IDM Entry Module

CHoCH is first indication for reversal and you'll see two type entry during Change of character first one is CHoCH with inducement and second entry CHoCH Without inducement in this case no need inducement structure just sweep the previous low / High and we can enter as per our entry module and same thing applicable in bullish and bearish condition. lets understand by given diagrams and examples .
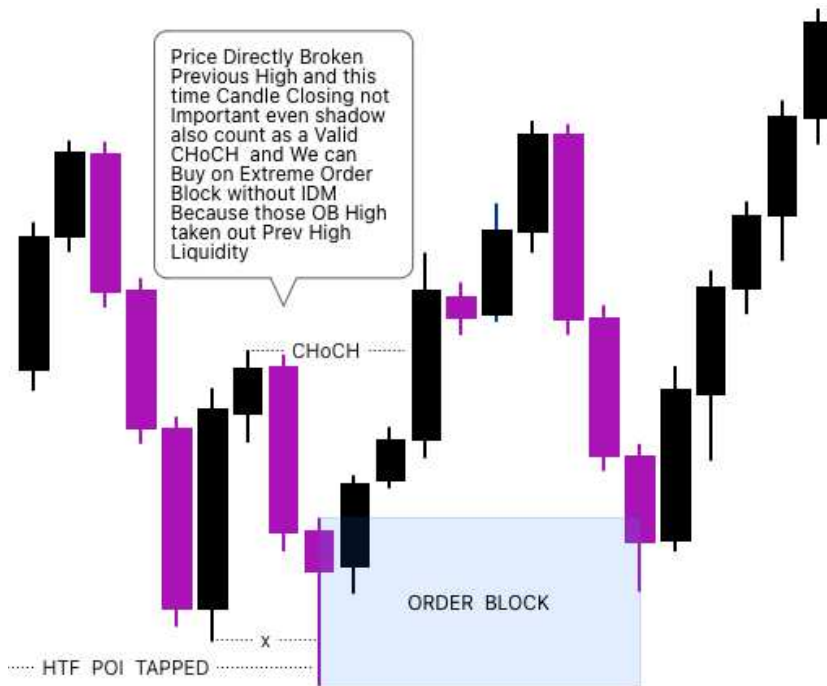

CHoCH without IDM Entry Module
When Price tap on Higher time frame POI and give small reaction in terms of structure and recet Order Block and give small reaction and failed to hold supply and finally break and create new demand / OB then you have to wait for IDM or Demand sweep for buy confirmation because liquidity is important . after taken out Liquidity we can Buy / Sell Here .

Price tap on Recent OB and give any selling reaction But failed to Hold and create new Demand Zone reaction that's called Supply to Demand (S2D) you can Also say Flip Entry Module

SUPPLY

DEMAND / SMT

x

Before Buy/Sell We need Inducement or liquidity sweep then we can take entry . so at this time price taken out this Demand and grab Liquidity and we can Buy as per Single candle OB

No need to mitigation this Extreme Order block because market already taken out Recent Demand which act Like IDM/SMT

DEMAND / OB

HTF POI TAPPED

FLiP without IDM Entry Module

SUPPLY

DEMAND

x

HTF POI

Taken out Demand and Buy Here no need to mitigated Extreme Order Block

BOS

BOS

BOS

X

X

Taken out iDM and Buy on Order Block

if you don't know that how do scale you're Winner and cut your'e losses then SMC not for you .Single candle mitigation is very Powerful way to add multiple entries in you're winside . single candle mitigation and sweep entries are similar . single candle mitigation not use everywhere you have to identify POI when you can add entries like this , Now i am going to explaining here That how and where you can trade trade using sweep and single candle mitigation.

EXTREME POI FOR SELL

LTF Order Block Mitigated Here
Once Price tap here then start selling into M1
Single candle mitigation until Broken Recent Low

H candle Taken out Previous Candle High also tap on POI and close Bearish and we can sell on Next Candle Open as a Single candle Order Block Entry

A candle taken out Prev Candle High we can sell on Next candle open after A candle close .

A candle taken out Prev Candle High and close Bearish and Take Entry on B Candle Open

C candle taken out Prev B Candle High and close Below and Sell on Next candle Open

N candle High Mitigate A candle Low and become valid Sell Entry and above it no unmitigated OB

D candle High and C candle Low Mitigated But No Entry Because Major Low Broken so you have to wait for create new structure taken out and scale again entries like this.

I D M

CHoCH

B O S

Single Candle Mitigation Entry

HTF POI

BOS

EQL

Every Entry Taken out Previous Candle High taken or Single Candle Order Block Entries

Sweep and Single candle mitigation mostly work on similar Liquidity . Taken out Major High and Low thats is called Liquidity Sweep and Taken our Prev Candle High and Low that's called Single Candle Mitigation Entry . and You can also take entry on single candle Order Block based . Price must be tap on LTF POI then you can take Single candle Mitigation entry.

B O S

D candle Low Mitigate A candle High and become valid buy Entry and Below it no unmitigated OB

H candle Low and G candle High Mitigated But No Entry Because Major high Broken so you have to wait for create new structure taken out and scale again entries like this.

G candle taken out Prev N Candle Low and close above and buy on Next candle Open

I candle taken out Prev Candle Low and close Bullish and Take Entry on N Candle Open

A candle taken out Prev Candle Low and we can Buy on Next candle open after A candle close .

CHoCH

I D M

R candle Taken out Previous Candle Low also tap on POI and close Bullish and we can buy on Next Candle Open as a Single candle Order Block Entry

EXTREME POI FOR BUY

LTF Order Block Mitigated Here
Once Price tap here then start Buying into M1
Single candle mitigation until Broken Recent High

Single Candle Mitigation Entry

B O S

B O S

CHoCH

Taken out Prev Candle Low and Buy on Next Candle Open

Price tap on Extreme Order Block and Buy Here

Prev Major Low taken out and Buy on next Candle open and same things in all Single Candle entries

HTF POI

When you start play on both side move major and minor thats is Ping Pong Entries . These types of entries are really toughest because few peoples can think in both side and main thing to take action for buy and sell BUT I'll make you some easy to understand things which will help you a lot to understand that where and when you should enter ot not . if you don't like to play both side then you can leave or avoid because it's not means that only Ping Pong traders can make money only. majority focus on you're strong side , for example me I like to trade SHORT (Sell) Market . Majority of the time i Sell Market and few times I bought .to trade ping Pong first you have to identify your POI and reaction Zone / POI / Point . when market tap on your POI then identify on which level can market react and how you'll react if same thing happen as you planned . lets understand by few examples below .
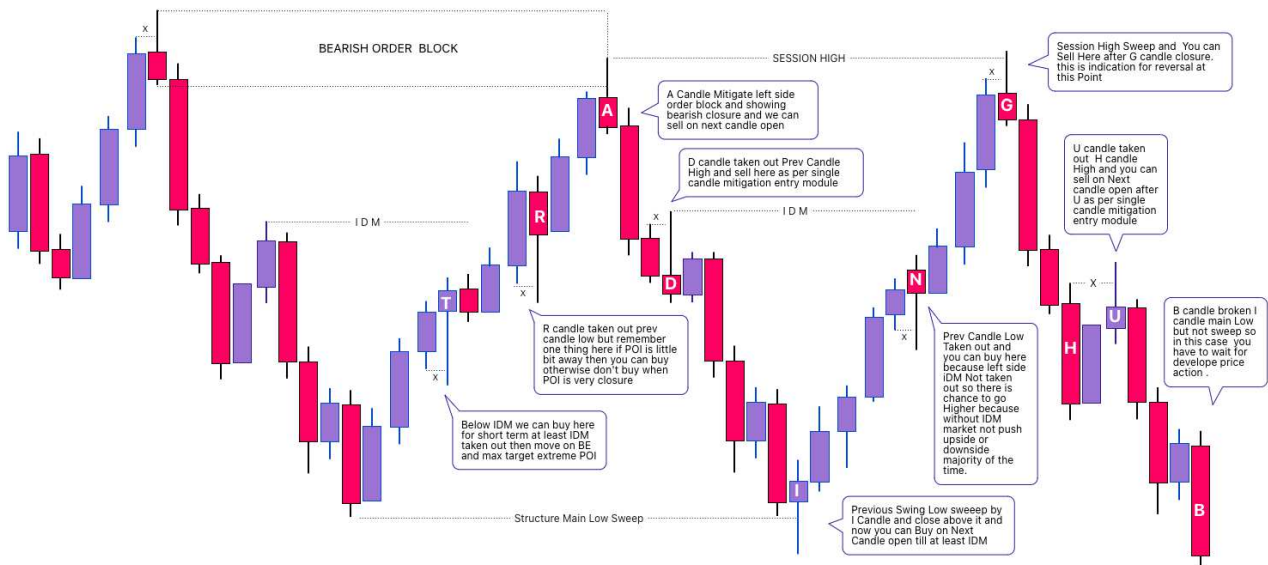

Ping Pong Entries Explanation
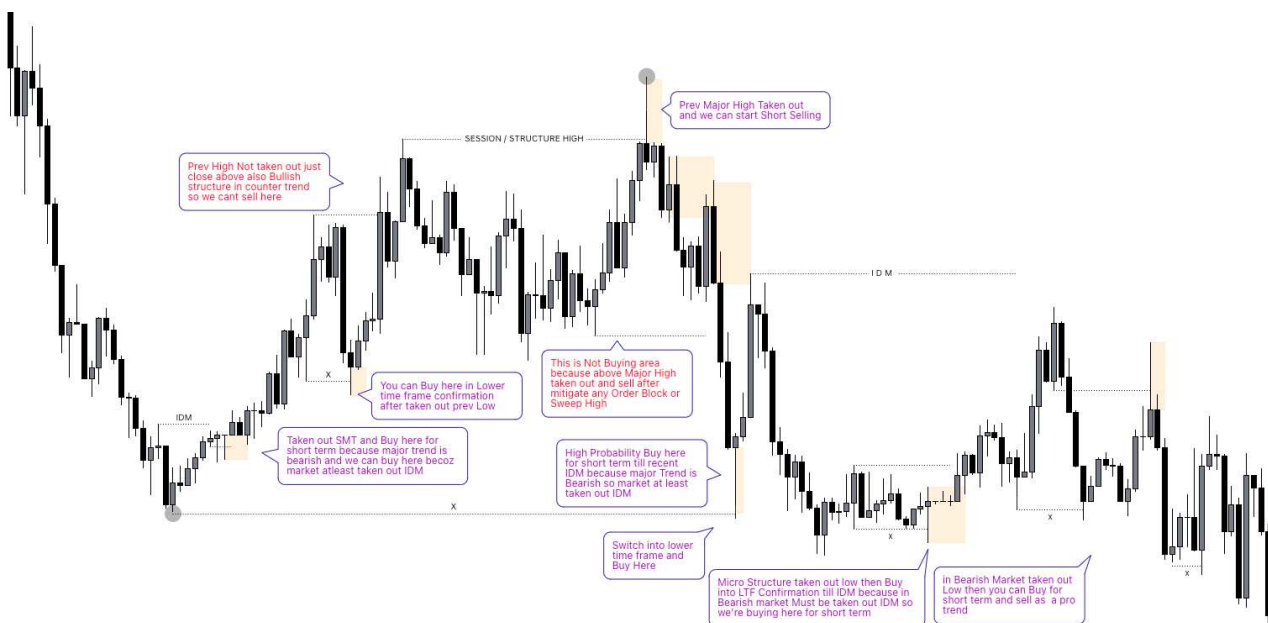

Always remember 2 things during Entries to identify Ping Pong, First things identify structure and if structure is bearish then always Buy on Demand or Prev Low Sweep and this buy will be short term Buy . if price tap on Supply or sweep any session high then hold for Longer run and sell in LTF Confirmation. same rules will be applicable in Bullish market if market taken out High then then sell for short term and Buy when price taken out Low or tap on demand . this Buy will be High Probability Buy .

RISK MANAGEMENT

Trading is game of probability then you should take risk as per your capital and own capacity there are no holy grail strategy , you have to think in Both side first think about Risk which you are taking in a trade dont think about profit . when you focus on managing risk then profit will be automatic . Lots of people do wrong side focus on profit only and start imagine in profit only they forgot about risk management because it's all about probability game so think about both side Probability . You should always take trade with proper risk management when you have own Self Live account then take 1%-2% Max in a single trade and if you have Funded account then take 0.25 - 1% risk on each trade . when trade move as per your direction then first focus on protecting your Stop Loss . when market break recent High Low then move your stop loss on Breakeven and don't try to caught 1:30-50RR because most of the traders are doing brainwash on social media to shown you big RR but in reality 1:5 -1:10 are very excellent Risk Reward , you don't need to go achieve Big RR . Focus on protecting what you have and wait for High probability Entry .

Do not trade emotionally otherwise you can't make money , trade emotionless and always trade on High Probability POI don't trade everywhere , Patience is Big Parts to trade so wait for it and Enter when everything is fine as per plan .

Self Account Risk Per Trade 1-2%
Funded Account Risk Per Trade   0.25 - 1%
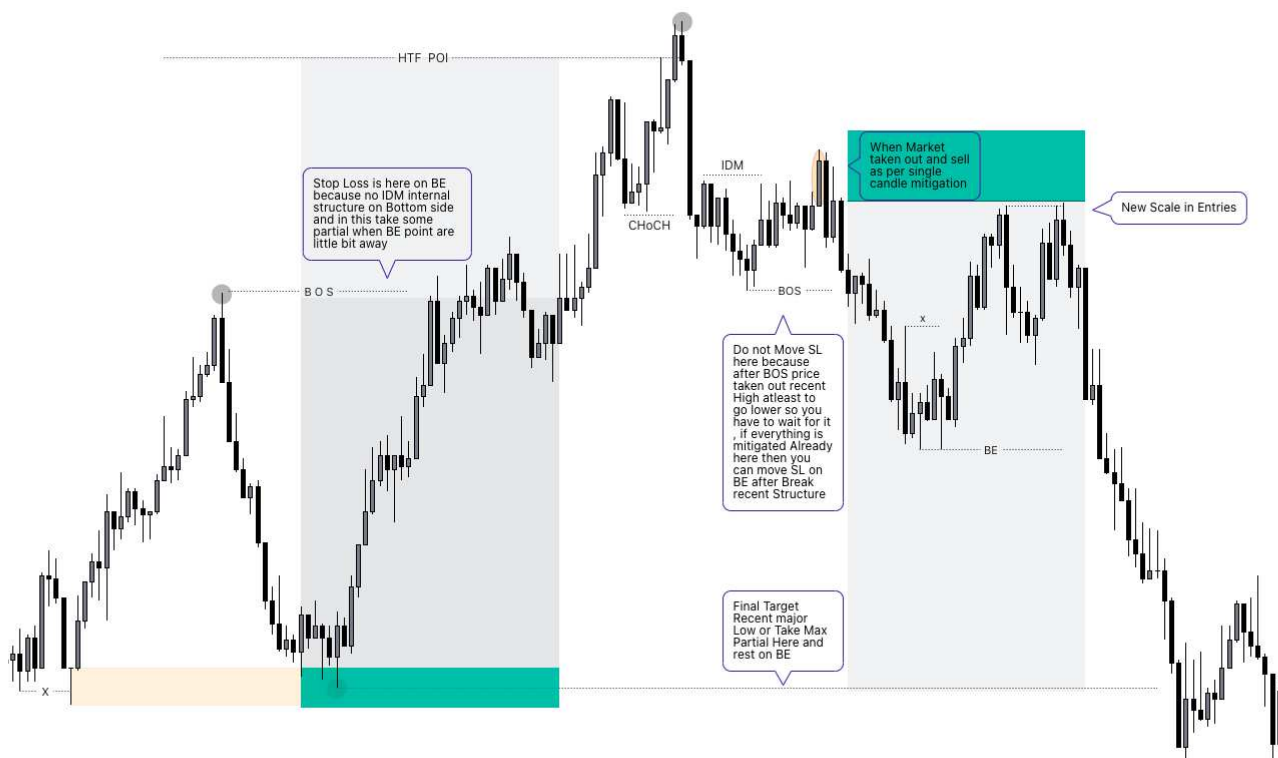

THANK YOU

Thank You so much studying High Quality Education Ebook this is Game Changer if possible try to read again and again you'll learn new things every time . I Hope this is Turning point in your trading Career and will be Very Helpful to you.

I Have all legal right of this ebook if someone try to do any misuse reselling , copy cut paste or chart copying modification by editing the legal action action will be taken against him . if you think someone is doing this , then you can contact below , this will save the book from being misused . this is for You're Learning to Boost your trading skill .

Your Feedback is Really important for me . What you have learned and what do you wanna suggest to others who's struggling in Smart Money Concept .Please share your Honest Review on telegram or Post on instagram story and tag @trading_hub_
